- Wild radish
- Wild (annual) sunflower

Please see label for additional pasture weeds controlled.

*Ensure appropriate rate is selected based on weed type and weed stage.

PRO TIPS

- For annual cereals and forage grasses, apply from the 3-leaf stage up to flag leaf
- For flax, apply after 2 inches in height and prior to budding. For maximum crop safety apply between 2 – 4 inches in height.
- For forage legumes apply at the 1 – 2 trifoliate stage
- May also be applied for vegetation management purposes on non-crop land
- Allow 7 days prior to harvesting forage

ALWAYS READ AND FOLLOW LABEL DIRECTIONS
